Why this test should be taken honestly

Most business owners understand that AI matters, but they do not know where to start.

The problem is rarely the technology itself. Today, AI tools are accessible and affordable.

The real problem is that most companies try to automate chaos.

Chaos cannot be automated. It only gets faster.

This test will help you understand:

- where your business is today
- what needs to be done before introducing AI
- which weak points exist in your management system

There are no right answers here. Only an honest diagnosis.

How to score each statement

0**this does not exist****1****exists partially****2****works systematically**

“We created this checklist based on diagnostics of Ukrainian businesses. The questions are simple, but the answers often reveal the real state of the system.”

Stanislav Buchatskyi

Co-founder of Latwo · AI Consultant

01 Owner Independence

Can the business operate without you?

1

There is a clear distribution of roles and responsibilities in the business.

no 0

partially 1

yes 2

2

Key processes are documented and do not depend on one person.

no 0

partially 1

yes 2

3

I can step away from work for a week and nothing critical will break.

no 0

partially 1

yes 2

4

Team decisions are made based on clear rules, not only through me.

no 0

partially 1

yes 2

Block result 01: ___ / 8

02 Processes and Operating System

Do you have a system, or does everything depend on people?

1

Core business processes are documented and understood by the team.

no 0

partially 1

yes 2

2

There are regular meetings with a fixed structure and clear outcomes.

no 0

partially 1

yes 2

3

There is a task management system such as Trello, Asana, Notion, or a similar tool.

no 0

partially 1

yes 2

4

Recurring tasks are already partly automated or standardized with templates.

no 0

partially 1

yes 2

Block result 02: ___ / 8

03 Data and Analytics

Do you make decisions based on data?

1

We collect key business metrics such as revenue, conversion, costs, and other relevant indicators.

no 0

partially 1

yes 2

2

Data is stored centrally rather than scattered across separate spreadsheets or chats.

no 0

partially 1

yes 2

3

We regularly analyze data and make decisions based on it.

no 0

partially 1

yes 2

4

There is a CRM or another system for working with clients.

no 0

partially 1

yes 2

Block result 03: ___ / 8

04 Team and Culture of Change

Is your team ready for transformation?

1

The team is open to new tools and approaches.

no 0

partially 1

yes 2

2

There is at least one person who can become a driver of change.

no 0

partially 1

yes 2

3

We have already tried to implement new technologies or processes.

no 0

partially 1

yes 2

4

There is a culture of feedback and continuous improvement.

no 0

partially 1

yes 2

Block result 04: ___ / 8

05 Owner's Personal Readiness

Are you, as a leader, ready for AI transformation?

1

I understand that AI is not magic, but a tool that requires a system.

no 0

partially 1

yes 2

2

I am ready to invest time in learning and implementation.

no 0

partially 1

yes 2

3

I have a clear vision of where the business should move over the next year.

no 0

partially 1

yes 2

4

I am ready to delegate and trust processes instead of controlling everything personally.

no 0

partially 1

yes 2

Block result 05: ___ / 8

Your result

Write down the score for each block and calculate the total result.

01 **Owner Independence** ___ / 8

02 **Processes and Operating System** ___ / 8

03 **Data and Analytics** ___ / 8

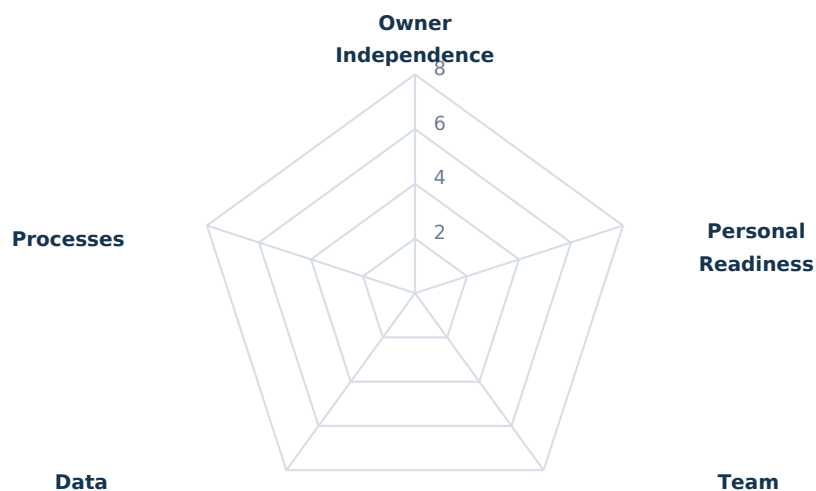

04 **Team and Culture of Change** ___ / 8

05 **Owner's Personal Readiness** ___ / 8

Total score: ___ / 40

Your readiness profile

Plot the score of each block on the axes and connect the points.

Your archetype

Find your score range and read the description.

0 - 14 points

Firefighter

You are constantly putting out fires. The business depends on you personally. Processes are not documented, decisions are made chaotically, and data is not collected systematically. AI will not help yet — first you need a basic structure.

Your next steps:

- Describe 3-5 key business processes.
- Define roles and areas of responsibility.
- Start collecting basic metrics.
- Contact Latwo to build the foundation.

15 - 27 points

Builder

You have a foundation, but the system is not complete yet. Some processes work, there is initial analytics, and the team is partly ready. You are on the right track, but the gaps need to be closed before introducing AI.

Your next steps:

- Complete process documentation.
- Centralize data collection.
- Identify 2-3 areas for a pilot AI implementation.
- Book a Discovery Call with Latwo.

28 - 40 points

Strategist

Your business already has a system, data, and a team that is ready. You can implement AI effectively and get real results. All that remains is to choose the right strategy and tools.

Your next steps:

- Define strategic AI priorities.
- Choose the first processes to automate.
- Build an AI transformation roadmap.
- Contact Latwo for a strategic partnership.

3 major mistakes when implementing AI

Even companies with a high level of readiness make these mistakes. Avoid them — and you will save months of work.

01 Starting with tools instead of processes

Many companies buy AI tools without having documented processes. As a result, the tool exists, but nobody knows how to use it properly and there is nowhere to embed it. AI works only when there is a clear system into which it can be integrated.

Describe the process first. Then automate it.

02 Delegating transformation only to IT

AI transformation is not an IT project. It is a change in the way the whole team thinks and works. If the transformation is led only by the technical department, without leadership and business process involvement, there will be no real result.

Transformation starts with the owner, not with IT.

03 Trying to implement everything at once

The attempt to automate everything immediately leads to team overload, system conflicts, and frustration. The effective way is to start with one process, get a result, and then scale further.

One process > one result > scaling.

What next?

If you have taken this test and identified gaps, that is already the first step.

Now the important thing is not to stop there.

Latwo will help you turn this diagnosis into a concrete action plan. We do not just give advice — we build the system together with you.
